

Q1: Chatbot-Based Banking Assistant

A bank provides a chatbot for:

- Balance enquiry
- Transaction alerts
- Loan status

Tasks:

- Design using:
 - Amazon Lex
 - AWS Lambda
 - Amazon SNS
 - IAM
- Explain:
 - Intents, slots, backend flow
 - How notifications are triggered
 - Security using IAM roles

Q2: Secure Deployment + Chatbot Integration

The same platform wants:

- Quick deployment of backend
- A chatbot for order tracking

Tasks:

- Use:
 - AWS Elastic Beanstalk
 - Amazon Lex
 - IAM
- Explain:
 - How Beanstalk simplifies deployment
 - How Lex integrates with Lambda backend
 - IAM role design for chatbot
 -

Q3: Platform Deployment & Scaling

Platform must:

- Be deployed quickly
- Auto-scale during exams
- Maintain uptime

Tasks:

- Use:
 - AWS Elastic Beanstalk
 - Elastic Load Balancing
 - Auto Scaling Groups
- Explain:
 - Deployment workflow
 - Scaling triggers
 - Multi-AZ concept

Q4: End-to-End Cloud Architecture

Design a system where:

- Users interact via web + chatbot
- Requests processed asynchronously
- Notifications sent
- System scales dynamically

Must include ALL:

- Amazon Lex
- AWS Lambda
- Amazon SQS
- Amazon SNS
- Elastic Load Balancing
- Auto Scaling Groups
- AWS Elastic Beanstalk
- IAM

Tasks:

- Draw architecture
- Explain complete data flow
- Identify failure points

Q5: Booking Workflow

When a user books a ticket:

- Request handled by web app
- Booking processed asynchronously
- Notifications sent

Tasks:

- Use ALL:
 - Elastic Load Balancing
 - Auto Scaling Groups
 - Amazon SQS
 - AWS Lambda
