

WEEK-11—Amazon LEX

Step 1: Open Amazon Lex

1. Login to AWS Console
 2. Search **Amazon Lex**
 3. Click **Create bot**
-

Step 2: Create Bot

1. Choose:
 - **Create a blank bot**
 2. Enter:
 - Bot name: HotelBookingBot
 3. IAM role → Create new role
 4. Remaining default → next
 5. Language: English
 6. Voice (optional)
 7. Click **Done**
-

Step 3: Create Intent

1. Go to **Intents**
 2. Name: BookHotel
 3. Click **Create**
-

Step 4: Add Sample Utterances

Add user sentences (how user talks):

I want to book a hotel

Book a room

Reserve hotel

I need a room

These are **Utterances**

Step 5: Create Slots (User Inputs)

Slots collect user information.

Add Slot

1. Click **Add slot**
2. Fill:
 - Slot name: age
 - Slot type: AMAZON.Number
 - Prompt: *Which city do you want?*

Mark as **Required**

Add IF Conditions (Conditional Logic)

Used to control flow based on slot values

Example Condition:

If {age} < 18

Steps:

1. Go to **Intent → Slots** -> under **Advance options**
2. Scroll to **Slot capture: success response** -> **Conditional branching**
3. Click **Add condition**

Example:

Condition:

If {age} < 18

Response:

Your not eligible for hoot booking?

Step 6: Create Slots (User Inputs)

Slots collect user information.

Add Slot

3. Click **Add slot**
4. Fill:
 - Slot name: location
 - Slot type: AMAZON.City
 - Prompt: *Which city do you want?*
5. Mark as **Required**

Repeat for other slots.

1. Click **Add slot**
2. Fill details:
 - **Slot name:** checkin
 - **Slot type:** AMAZON.Date
 - **Prompt:**
"What is your check-in date?"
3. Mark as **Required**
(Optional but recommended)
 - Add **Retry prompt:**
"Please provide a valid date (e.g., 2026-03-25)"
4. Click **Save**

Slot 7: Number of Nights (nights)

Steps:

1. Click **Add slot** again
2. Fill details:
 - **Slot name:** nights
 - **Slot type:** AMAZON.Number

- **Prompt:**
"How many nights will you stay?"
 - 3. Mark as **Required**
 - 4. Click **Save**
-

Step 7: Create Custom Slot Type

Save intent

Click on Back to intents

If you want custom values:

1. Go to **Slot Types**
2. Click **Add slot type** -> **add blank slot type**
3. Name: RoomType

Add values:

Single

Double

Suite

Save slot type

Now use this in slot: go back to intent

- Slot name: RoomType
 - Slot type: RoomType
-

Step 9: Add Response Cards (Card Groups)

Used for buttons (quick replies)

Steps:

1. Go to **slot prompts** -> **more prompt options**
2. Click **Add** -> **add card groups**

Example:

Card Title: Select Room Type

click on add Buttons:

- Single → "Single"
 - Double → "Double"
 - Suite → "Suite"
-

Step 10: Configure Responses

Initial Response:

Welcome to Hotel Booking! What is your name?

Confirmation:

Do you want to confirm booking in {location} for {nights} nights?

Step 11: Build & Test

1. Click **Build**
2. Use **Test chatbot** panel
3. Try:

Book a hotel

Sample output

User: Book a hotel

Bot: What is your age?

User: 25

Bot: Which city do you want?

User: Hyderabad

Bot: Check-in date?

User: Tomorrow

Bot: Number of nights?

User: 2

Bot: Select room type

User: Double

Bot: Do you want to confirm booking in Hyderabad for 2 nights?

User: Yes

Bot: Booking confirmed.

SCENARIO BASED QUESTIONS

Scenario 1: Bot Not Responding

You created a chatbot, but when you test it, the bot does not respond to user input.

- What could be the possible reason for no response?
 - Did you build and publish the bot correctly?
 - How would you troubleshoot this issue?
-

Scenario 2: Incorrect Intent Matching

A user types a valid query, but the chatbot responds with the wrong intent.

- What could cause incorrect intent recognition?

- How do utterances affect intent matching?
 - How can you improve accuracy?
-

Scenario 3: Missing Slot Values

The chatbot asks for user input, but fails to capture required slot values.

- What is a slot in Amazon Lex?
 - Why might slot values not be captured properly?
 - How would you fix slot configuration issues?
-

Scenario 4: Fulfillment Not Working

The bot collects all user inputs but does not perform the expected action.

- What is fulfillment in Amazon Lex?
 - Could Lambda integration be misconfigured?
 - How would you verify the backend processing?
-

Scenario 5: Bot Not Accessible

You created the bot successfully, but users are unable to access it.

- Did you deploy or publish the bot?
 - Could permissions or channel integration be missing?
 - How would you make the bot accessible to users?
-

Scenario 6: Wrong Language Understanding

The chatbot fails to understand user queries written in slightly different formats.

- How does Amazon Lex process natural language?
- Why is training with multiple utterances important?

- How can you improve NLP performance?
-

Scenario 7: Versioning Issue

You updated the bot, but users still experience the old behavior.

- Did you create a new version of the bot?
 - Why is alias configuration important?
 - How do you ensure users access the latest version?
-

Scenario 8: Lambda Permission Error

The chatbot is connected to a Lambda function, but it fails during execution.

- What type of permission error might occur?
 - How are IAM roles used in this integration?
 - How would you fix the permission issue?
-

Scenario 9: Bot Gives Default Response

The chatbot always gives a fallback/default response instead of proper answers.

- What is a fallback intent?
 - Why does the bot fail to match user input?
 - How can you improve intent recognition?
-

Scenario 10: Multi-turn Conversation Issue

The chatbot fails to continue conversation properly after asking follow-up questions.

- What is dialog management in Amazon Lex?
- How are slots used in multi-turn conversations?
- How can conversation flow be improved?

Scenario 11: Integration with Web Application

A company wants to integrate the chatbot into their website.

- How can Amazon Lex be integrated with web applications?
- What services or APIs are required?
- What challenges might occur during integration?

Scenario 12: Performance Issue

The chatbot responds slowly when many users interact simultaneously.

- What could cause performance delays?
- How can scalability be handled in Amazon Lex?
- What AWS services can support high traffic handling?
